Success

24/7 access to servers and critical infrastructure equipment

Remote Management

KVM over IP solutions provide remote **bios-level access** to all attached servers, network devices, and other critical equipment.

- Manage and troubleshoot servers and devices remotely
- Reduce server downtime
- Centralize datacenter control
- Leverage existing authentication schema
- Provide detailed and comprehensive audit logging and reporting capabilities

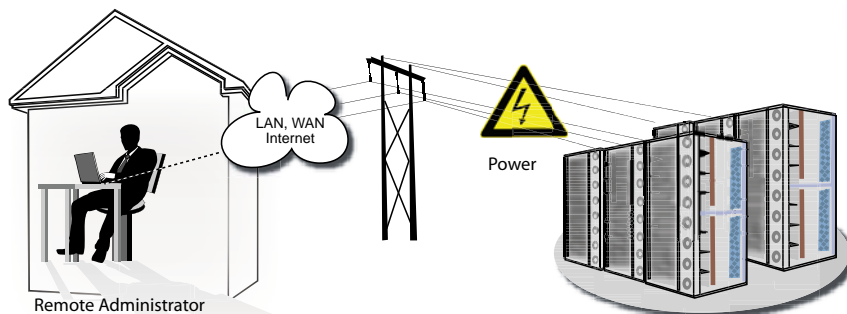

Reduce system downtime and maintenance expenses

Intelligent Power Control

Intelligent power control solutions leverage hardware and/or software to **monitor and control server-level power** state and condition.

- Reboot servers from any location at any time
- Cut down on third-party service calls for server reboots
- Reduce or eliminate late-night trips to the datacenter
- Monitor power consumption and status; proactively respond to issues

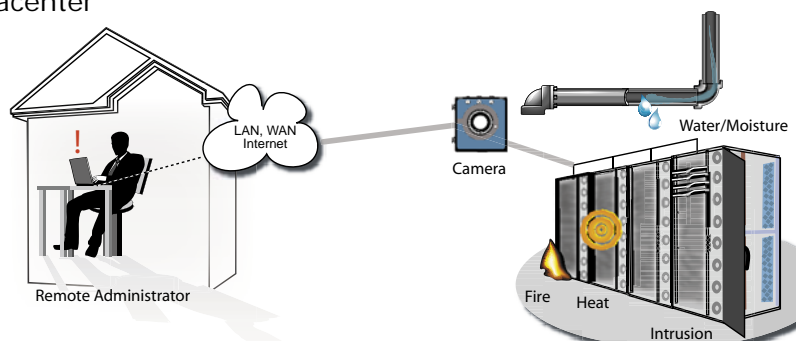

technology

Improve your visibility of critical resources

Environmental Monitoring Solutions

Environmental monitoring systems allow you to **proactively monitor and respond** to factors such as temperature, humidity, dew point, airflow, intrusion, etc.

- Monitor your environment and equipment on a continuous basis
- Receive automatic alerts when conditions exceed established thresholds
- Respond quickly to trends and issues before they cause downtime
- Improve physical security in the datacenter

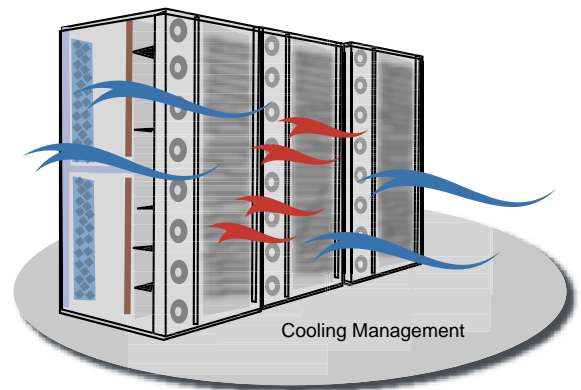

Mitigate datacenter cooling challenges

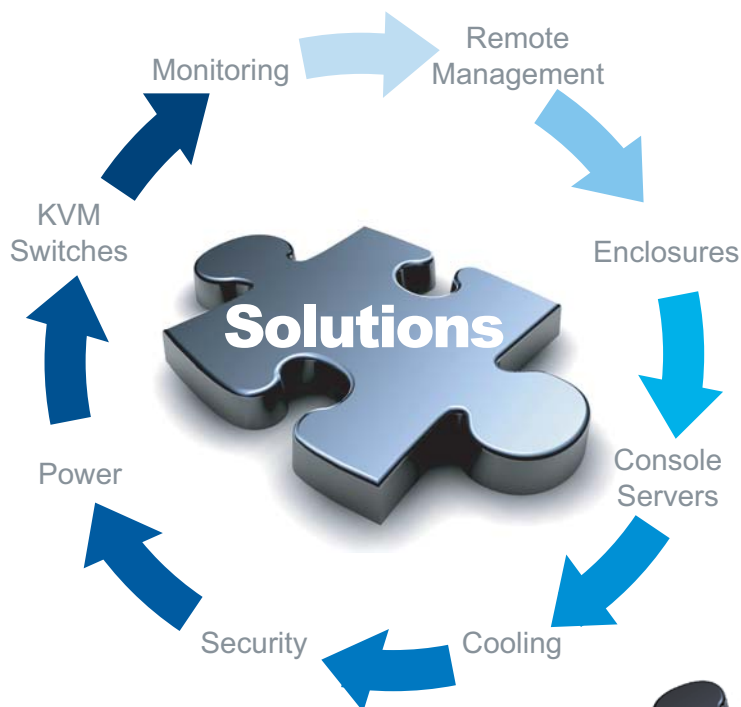

Enclosure and Cooling Systems

Appropriate management of cooling and heat removal can **alleviate datacenter temperature issues**.

- Promote proper airflow within the datacenter and within the rack
- Consider Liquid Cooling technology to minimize blade-center cooling challenges
- Evaluate leading technologies for hot-air containment and removal

42U: Solving the datacenter puzzle

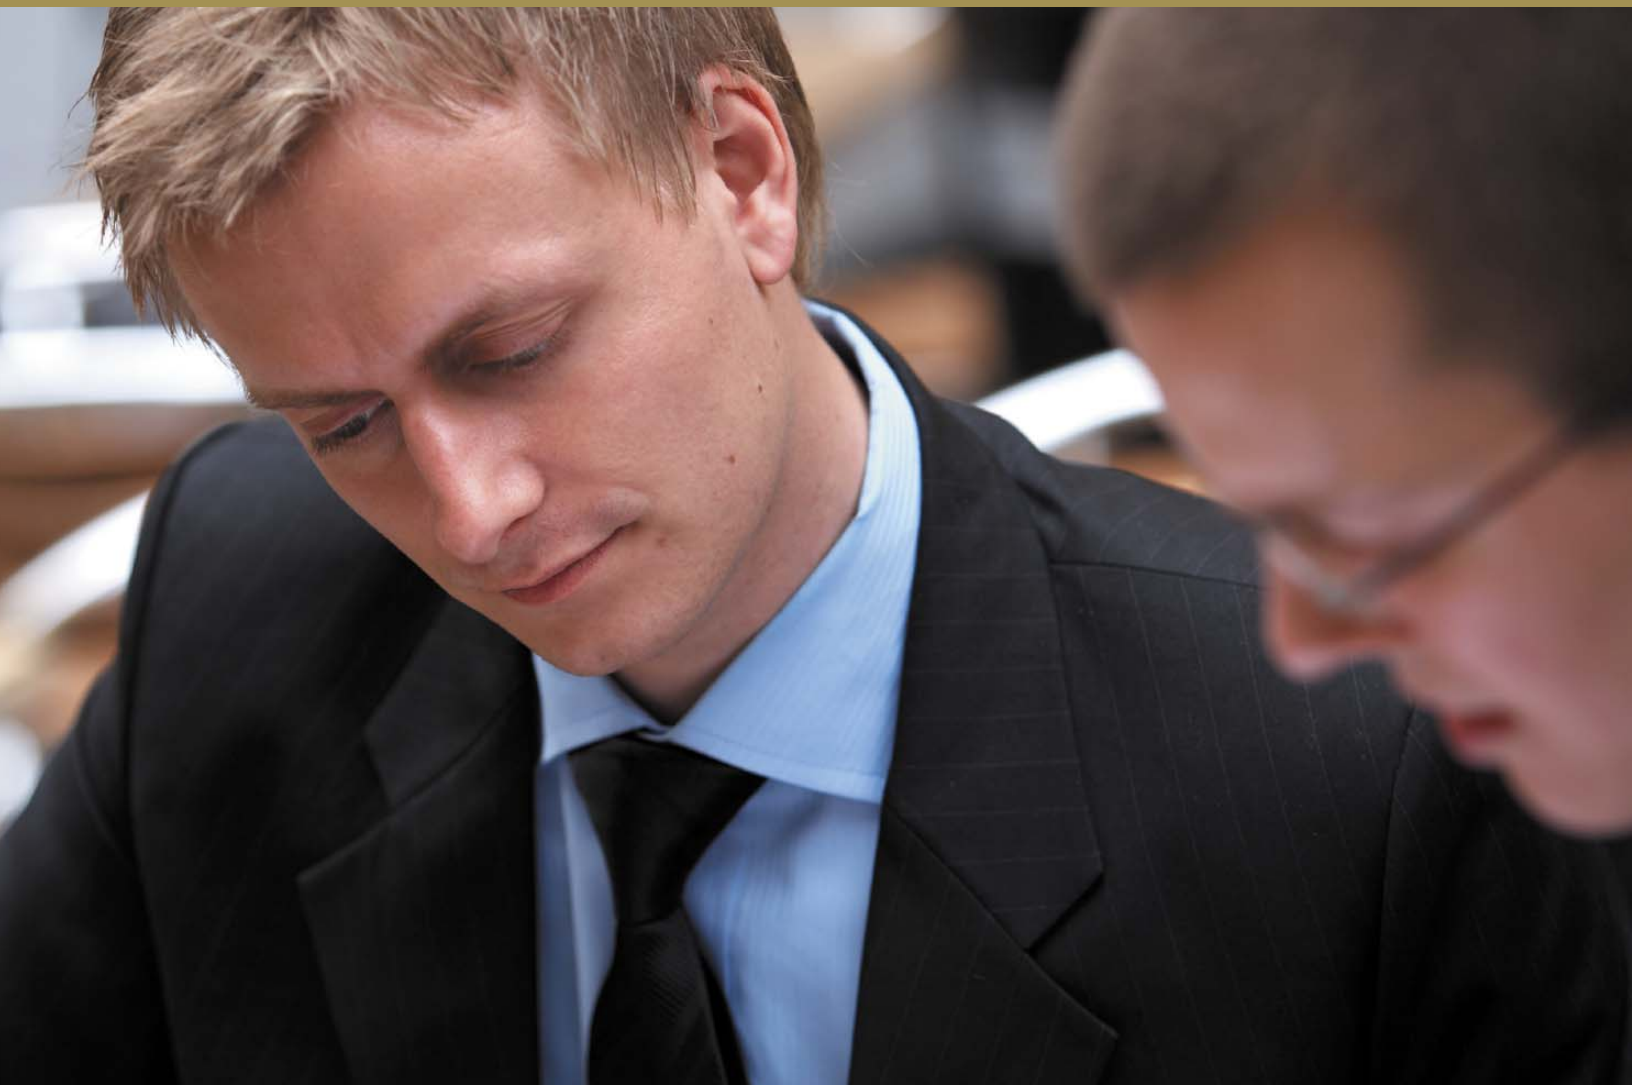

42U's Customer -Focused Approach

42U sales engineers believe in developing a true business relationship with all of our clients and give our clients the attention, consideration, passion, and professionalism they deserve. Using a consultative sales process, 42U engineers conduct a complete discovery process, which helps us understand the unique requirements that each customer's environment contains. This provides us with the information we need to make educated recommendations and create the best solution for our customers.

advantages

Technical Expertise

We understand market-leading technologies. By conducting our own training and testing in our in-house testing environment, we can better help you select the appropriate solutions and provide you with advanced tier-1 technical support.

Multi-Vendor Representation

We will give you unbiased advice. As an independent reseller, we represent the leading datacenter management manufacturers. This allows us to carefully evaluate all technology and evaluate and support the best solution for your application.

Turnkey Solutions

From start to finish, we will work closely with you to provide tailored, complete, turnkey datacenter management solutions.
