## General Description
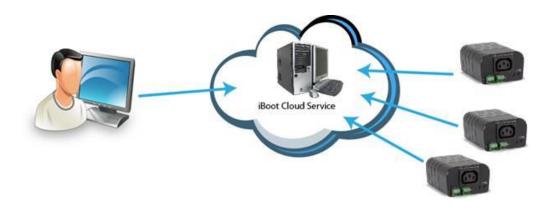

iBoot Cloud Service (iBCS) allows customers with iboot-G2 and iboot-g2+ units to access and control multiple iBoots in multiple locations from a single portal with a single sign-on.

## iBoot Cloud service - Operation

The operation of an iBoot Cloud Service account is as follows:

- Setup
  - Online account creation with e-mail confirmation from http://iBoot.co
  - Register cloud enabled iBoots and associate with the online account.
- Login
  - Control of Outlets is simple and intuitive.
  - Status of registered iBoots is clearly shown.
    - On,Off, Autoping or Heartbeat in G2+
    - Status is dynamic and will update automatically
  - A log of controlling events can be displayed. (time stamped)
  - Unique locations can be setup to assist with organizing iBoots
  - Unique names can be assigned for each iBoot
  - If an iBoot should go off-line, an e-mail will be generated
- Logout
  - When control is complete, just logout.
